

- Using x2go
  - If you don't have it installed on your computer
    - google “binghamton university x2go” and one of the links will tell you how to download it
    - If you have a mac, you will also need to install XQuartz ([www.xquartz.org](http://www.xquartz.org) is where I got a copy)
  - If you are going to use x2go from off campus, you will also need to install/use Pulse Secure when using x2go from off campus
    - I went here, <https://www.binghamton.edu/its/about/organization/operations-and-infrastructure/networking/2fa-pulse-secure-ssl-vpn.html>, and eventually found it
  - To start x2go on the LN G103 computers
    - Click on the Windows icon at bottom left corner of the screen
    - Type “x2go”
    - Select “X2Go Client”
  - Once you start x2go, create a new session
    - There's a screenshot of my session on the next slide
    - Under Input/Output, “Maximum available” seemed to work OK under “Display” for me
  - Then click on the session name
    - There's a screenshot after the next slide
  - Then log in
    - There's a screenshot after the slide after the next slide

Session name: New session

Path: /

...

#### Server

Host: remote140.cs.binghamton.edu

Login: garrison

SSH port: 22

Use RSA/DSA key for ssh connection:

- ☐ Try auto login (via SSH Agent or default SSH key)
- ☐ Kerberos 5 (GSSAPI) authentication
- ☐ Delegation of GSSAPI credentials to the server
- ☐ Use Proxy server for SSH connection

#### Session type

☐ Run in X2GoKDrive (experimental)

XFCE

Command:

**New session**

Click here to start a session

 garrison@remote140.cs.binghamton.edu

 XFCE

 1024x768

 Disabled

Session: New session

 **New session**  
XFCE on remote140.cs.binghamton.edu

Login:

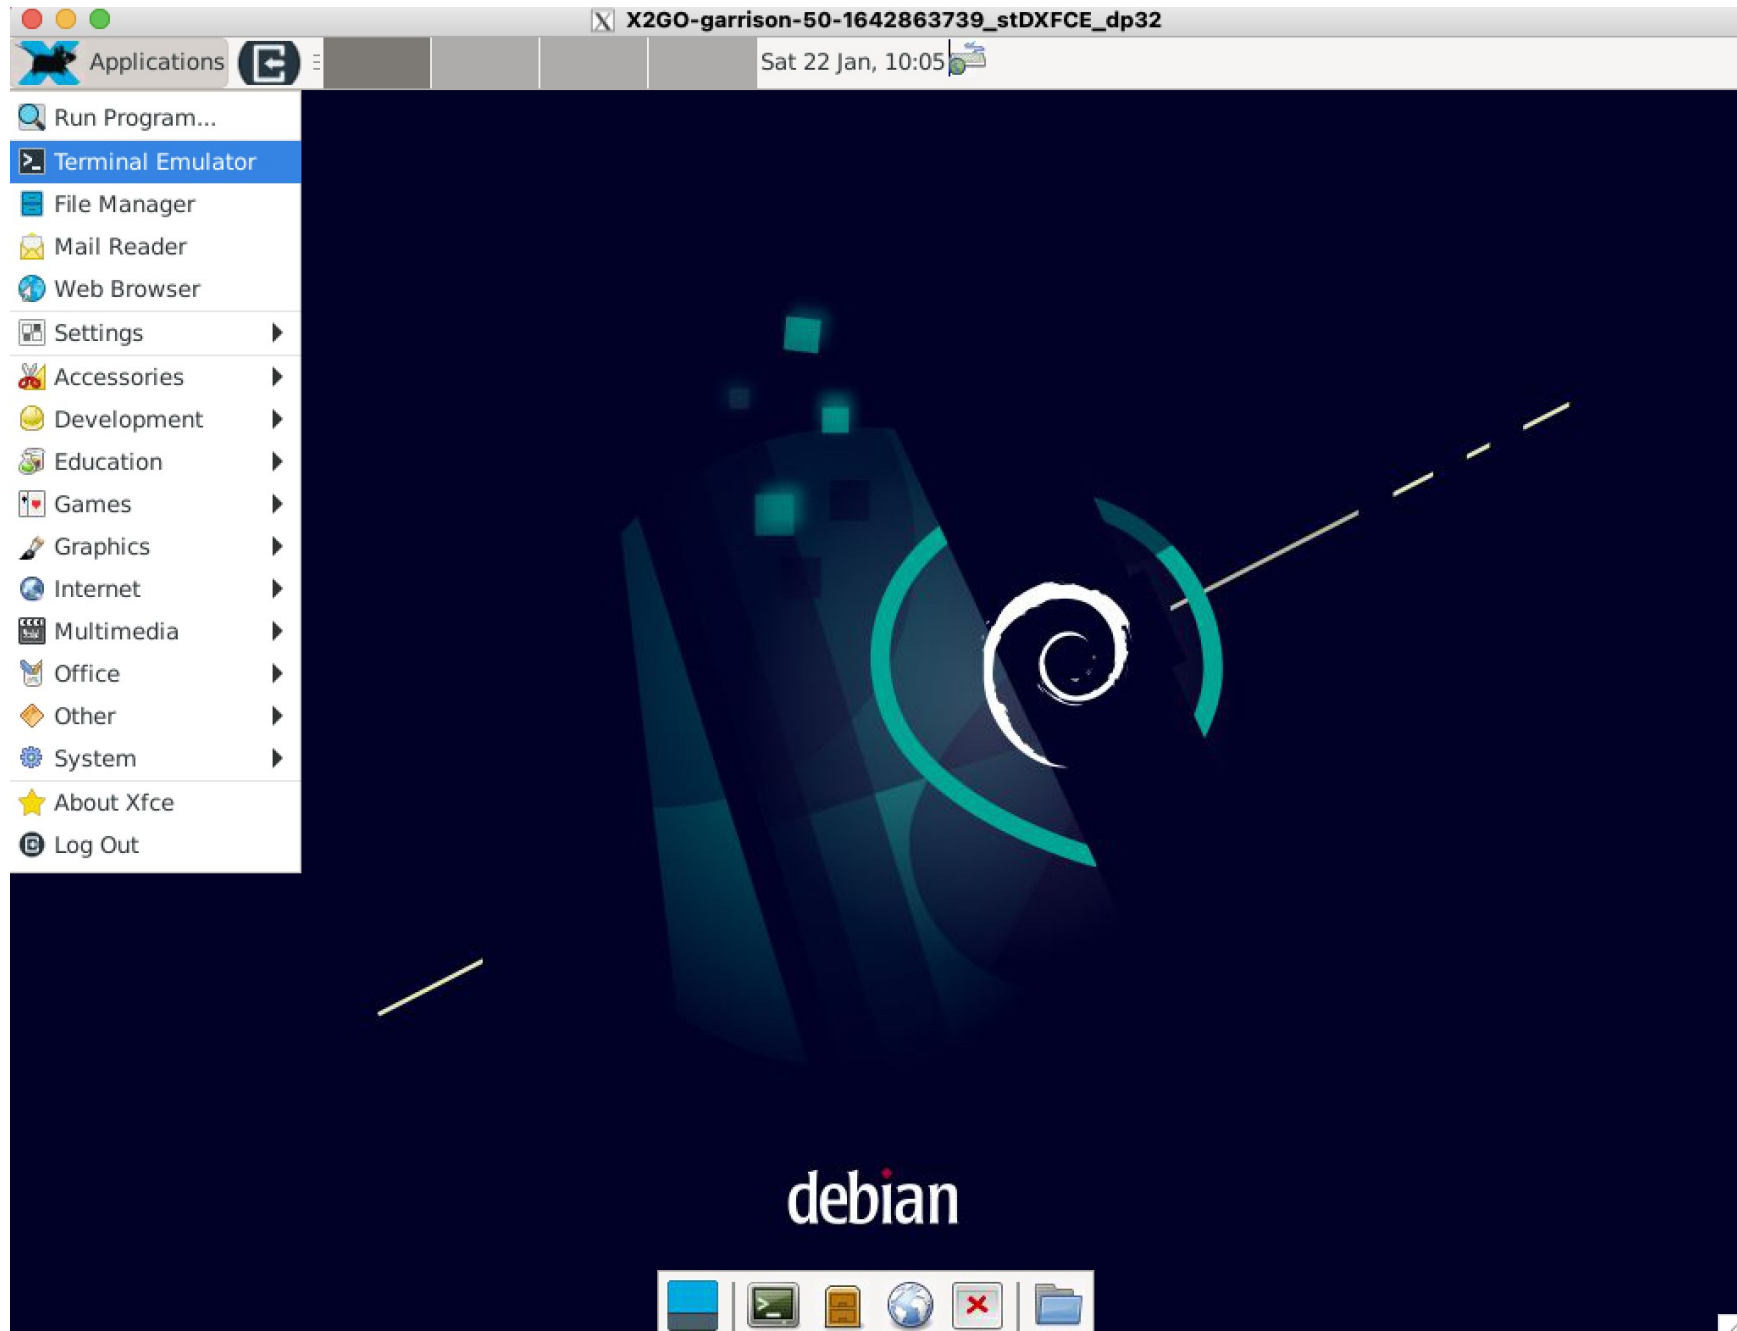

Password:

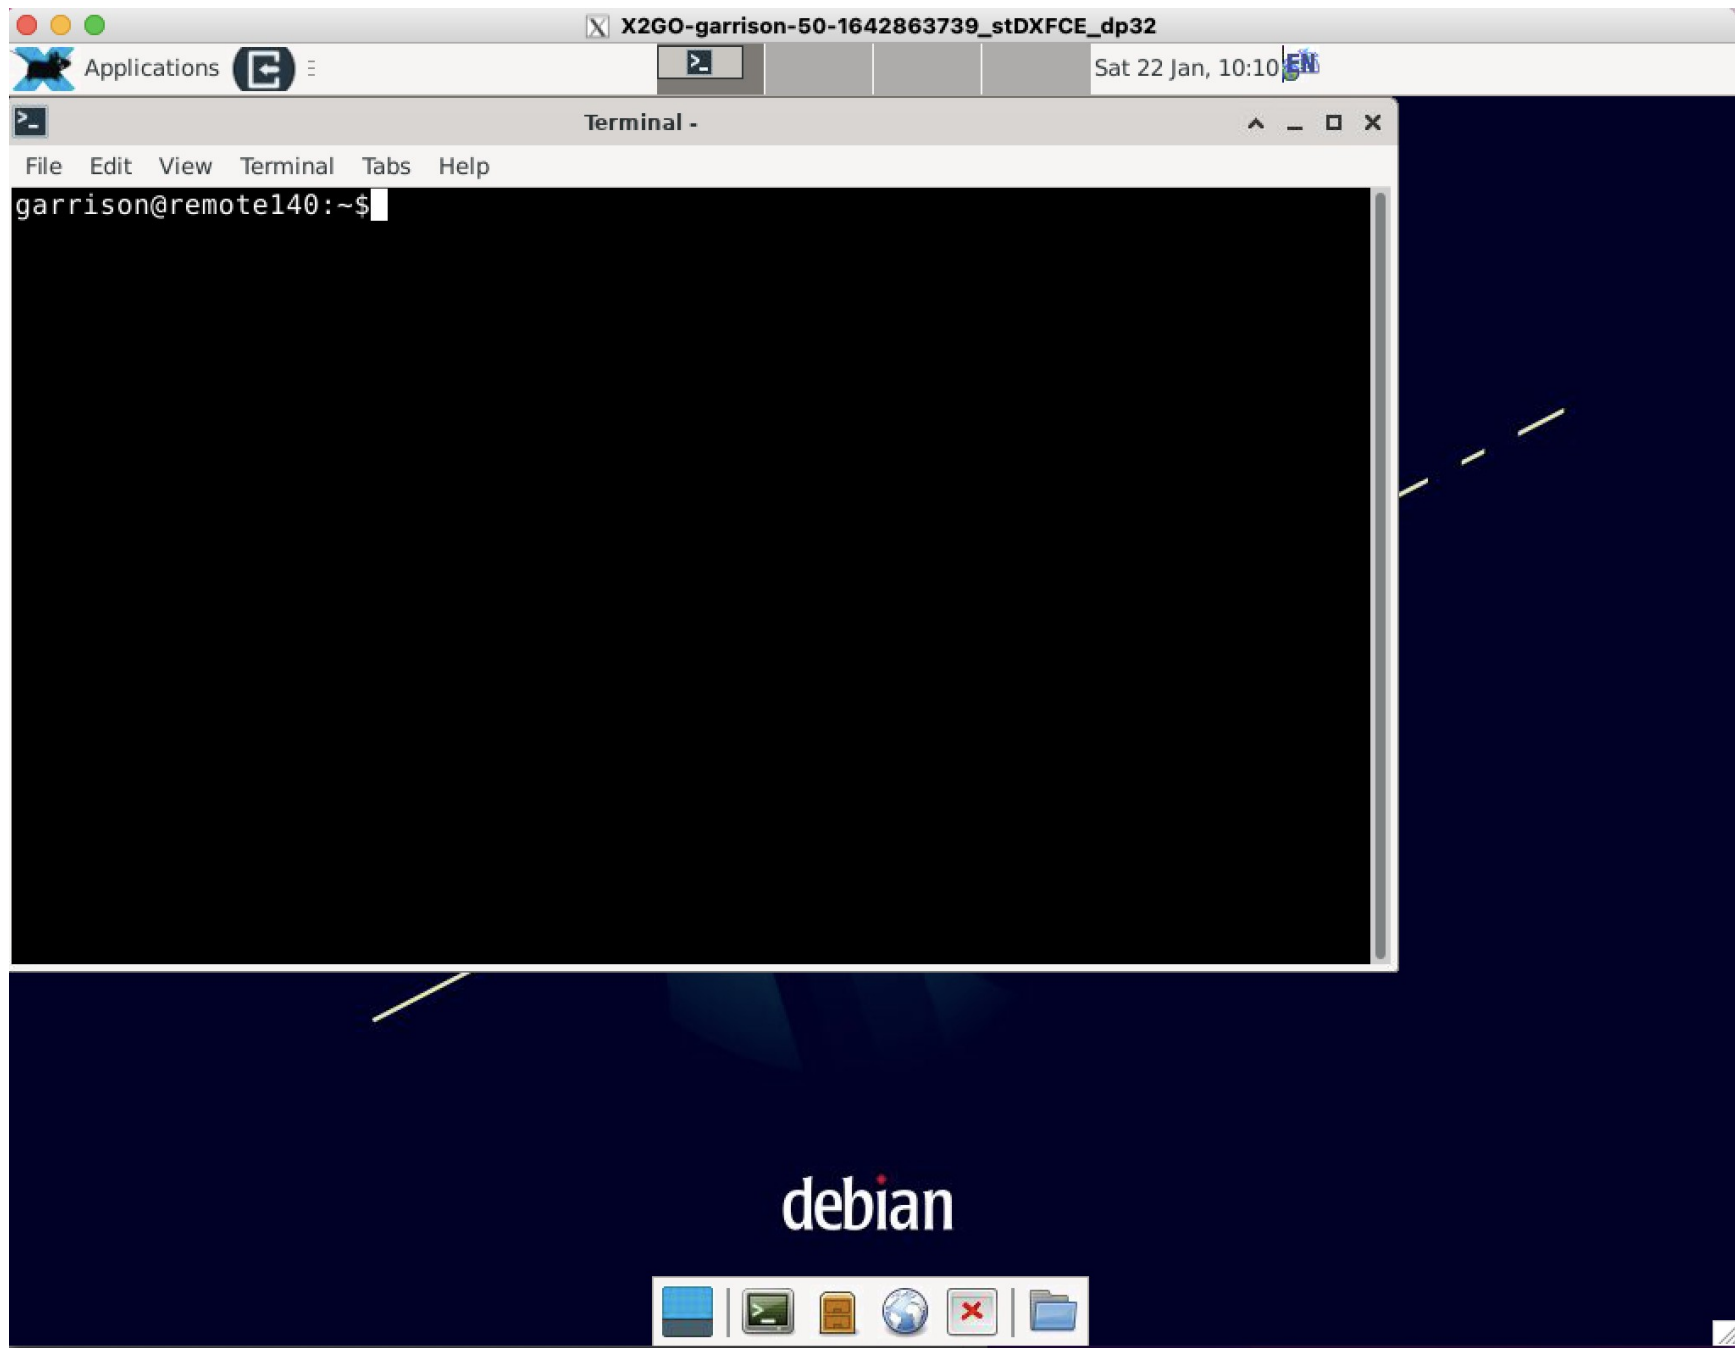

- You are now logged into remote140.cs.binghamton.edu and should see something like below

- Select “Applications” in the upper left and then select “Terminal Emulator”

- You now have a linux command prompt

- The dream is that we are all able to use x2go from the computers provide in LN G103, but since this is the first activity section, who knows what will actually happen
- I was able to get into remote140 this morning using x2go
- If you are unable to get to or log into remote140.cs.binghamton.edu, then
  - You can use the Windows computers in LN G103 to do the assignment
  - Or if you have a laptop with you and have Java JDK (Java Developer Kit – includes the compiler and runtime), you can use that to do the assignment
